

Suppl. Figure 1: The figures (which were sent to all groups at this resolution) to inform discussion. A. Patients defined as NMO or NMO spectrum are in the first column in orange. All other columns represent a single assay where a positive result is highlighted in orange and a negative result is white. B. Control subjects are listed in column 1 and coloured red. Each column after this is an individual assay. A positive result is highlighted in red and a negative result is white.
