

Supplementary figure 3: Gating strategy for the FACS analysis of CD137 expression on TCR-transduced CD8⁺-T cells after overnight co-culture with target cells. Target cells were labeled with 1 μ M CFSE before seeding to 96-well plate with effector cells. Cells were collected after overnight incubation at 37°C for staining with antibodies against human CD8-APC-H7, human CD137-PE and mouse TRBC-APC. DAPI-positive dead cells were excluded from the analysis.
