

**Supplemental Figure 1. Spleen [<sup>68</sup>Ga]Pentixafor uptake is not associated with PFS/OS in different entities.**

Kaplan-Meier survival curves of progression-free survival (PFS) and overall survival of different solid tumor entities, comparing patients with low to patients with high spleen-to-liver ratio ( $\text{SUV}_{\text{max}}\text{Spleen}/\text{SUV}_{\text{mean}}\text{Liver}$ ), adrenal cancer, PFS: low, n = 13, high, n = 13, OS: low, n = 13, high, n = 13; DSRCT, PFS: low, n = 5, high, n = 4, OS: low, n = 5, high, n = 4; neuroendocrine tumors, PFS: low, n = 13, high, n = 11, OS: low, n = 13, high, n = 11; NSCLC, PFS: low, n = 3, high, n = 3, OS: low, n = 3, high, n = 3; pancreatic adenocarcinoma, PFS: low, n = 4, high, n = 4, OS: low, n = 4, high, n = 4; SCLC, PFS: low, n = 5, high, n = 4, OS: low, n = 5, n = 4.

All statistical analyses were performed using log-rank (Mantel-Cox) test. P values as indicated on the graphs.

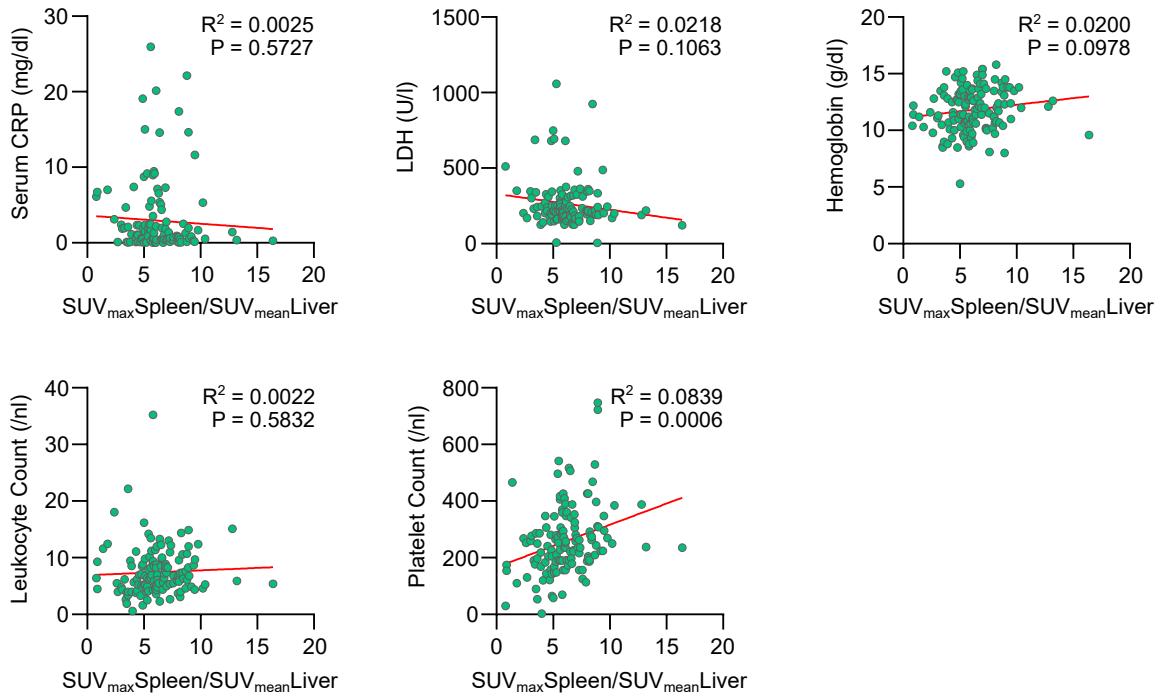

**A****B**

**Supplemental Figure 2. Spleen  $[^{68}\text{Ga}]$ Pentixafor uptake is not associated with PFS/OS in all entities, or adrenal cancers and neuroendocrine tumors, when comparing the highest to the lowest quartile of spleen CXCR4 expression.**

**A** Kaplan-Meier survival curves of progression-free survival, comparing the quartile with highest to the quartile of lowest spleen-to-liver ratio ( $\text{SUV}_{\text{max}}\text{Spleen}/\text{SUV}_{\text{mean}}\text{Liver}$ ). All cancers: low, n = 30, high, n = 30; adrenal cancers: low, n = 6, high, n = 6; neuroendocrine tumors: low, n = 6, high, n = 6.

**B** Kaplan-Meier survival curves of overall survival, comparing the quartile with highest to the quartile of lowest spleen-to-liver ratio ( $\text{SUV}_{\text{max}}\text{Spleen}/\text{SUV}_{\text{mean}}\text{Liver}$ ). All cancers: low, n = 30, high, n = 30; adrenal cancers: low, n = 6, high, n = 6; neuroendocrine tumors: low, n = 6, high, n = 6.

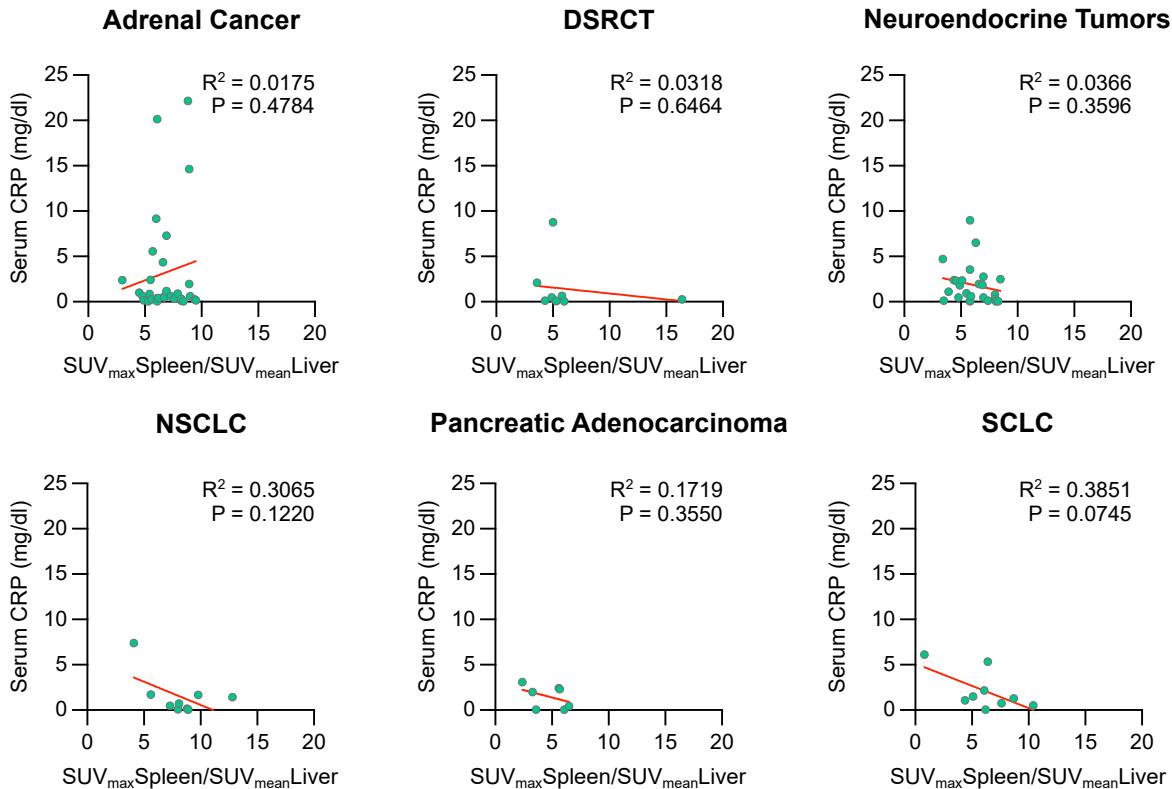

All statistical analyses were performed using log-rank (Mantel-Cox) test. P values as indicated on the graphs.

**Supplemental Figure 3. Spleen [ $^{68}\text{Ga}$ ]Pentixafor is positively associated with platelet counts in solid cancers.**

Correlations of spleen-to-liver ratios ( $SUV_{max}Spleen/SUV_{mean}Liver$ ) of all patients in this study with serum CRP levels (mg/dl), n = 128; serum LDH levels (U/l), n = 121; blood hemoglobin levels (g/dl), n = 138; peripheral leucocyte count (/nl), n = 138 and peripheral platelet count (/nl), n = 138.

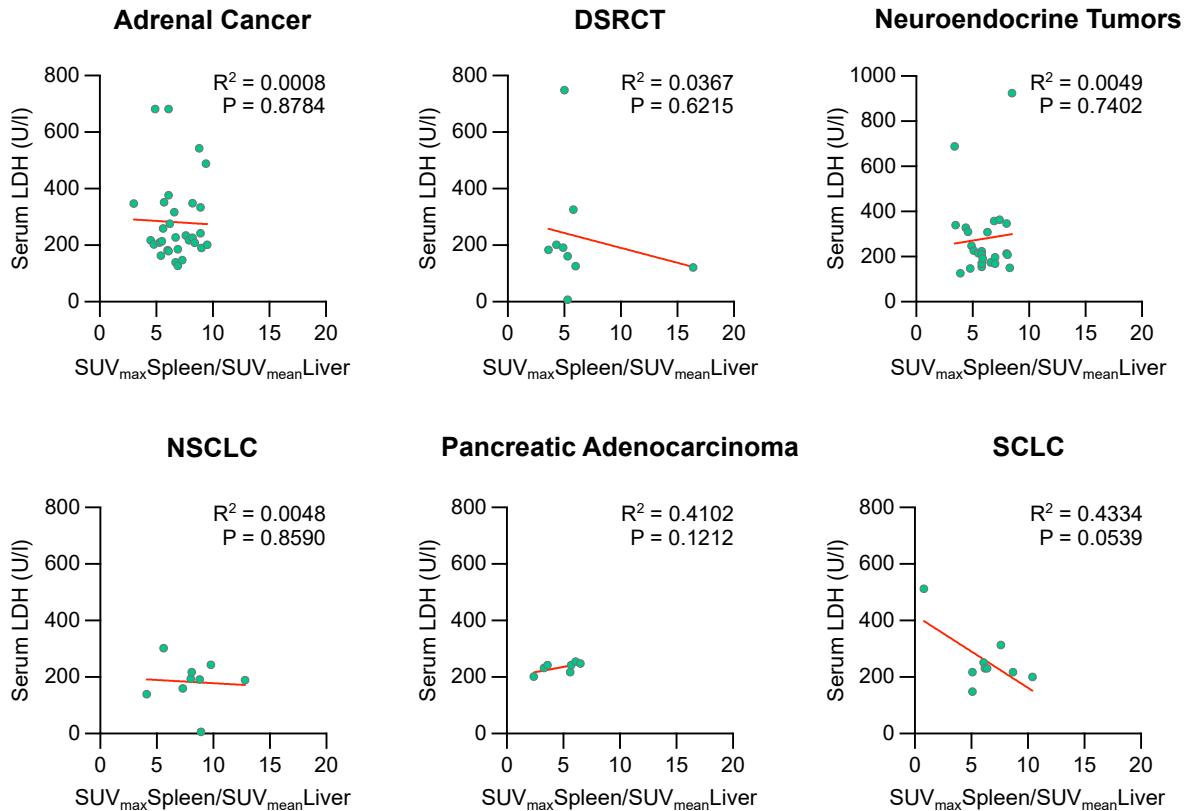

All statistical analyses were performed using simple linear regression.  $R^2$  and P values as indicated on the graphs.

**Supplemental Figure 4. Spleen [<sup>68</sup>Ga]Pentixafor uptake is not associated with serum CRP levels.**

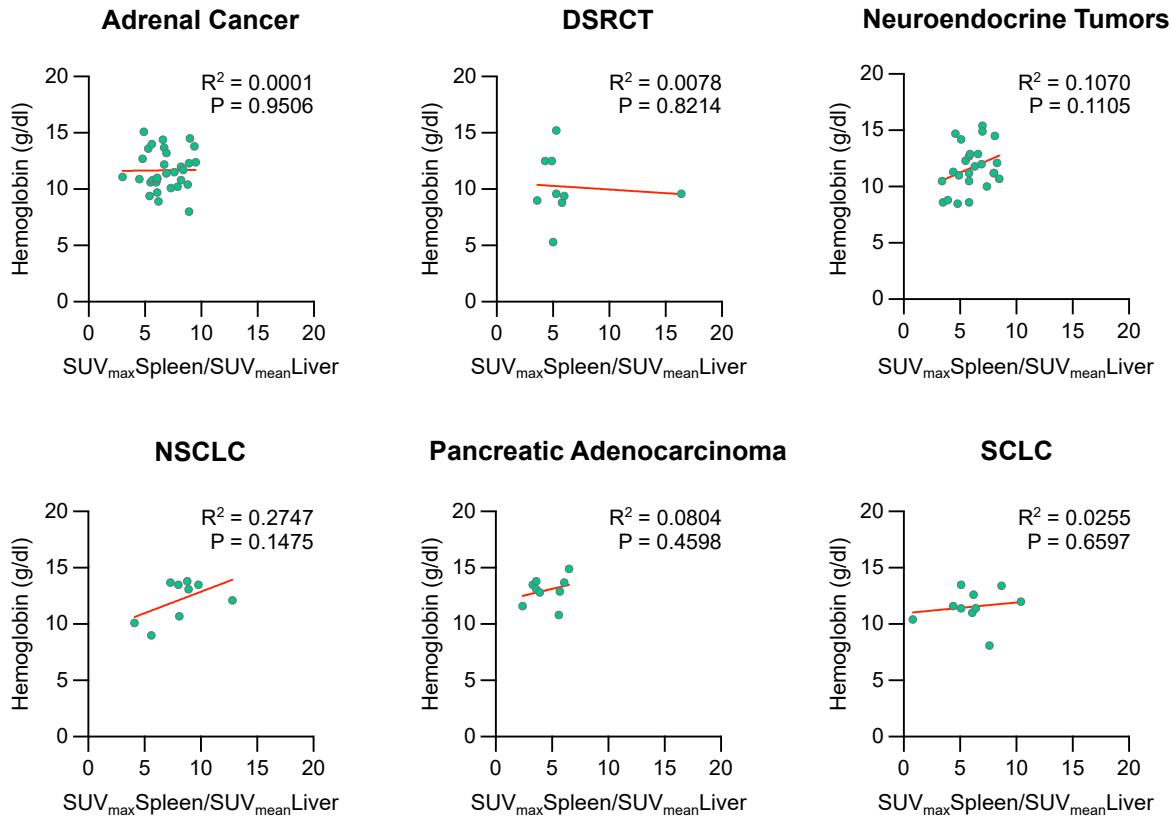

Correlations of spleen-to-liver ratios (SUV<sub>max</sub>Spleen/SUV<sub>mean</sub>Liver) with serum CRP levels (mg/dl) in patients with adrenal cancer, n = 31; DSRCT, n = 9; neuroendocrine tumor, n = 25; NSCLC, n = 9; pancreatic adenocarcinoma, n = 7 and SCLC, n = 9.

All statistical analyses were performed using simple linear regression. R<sup>2</sup> and P values as indicated on the graphs.

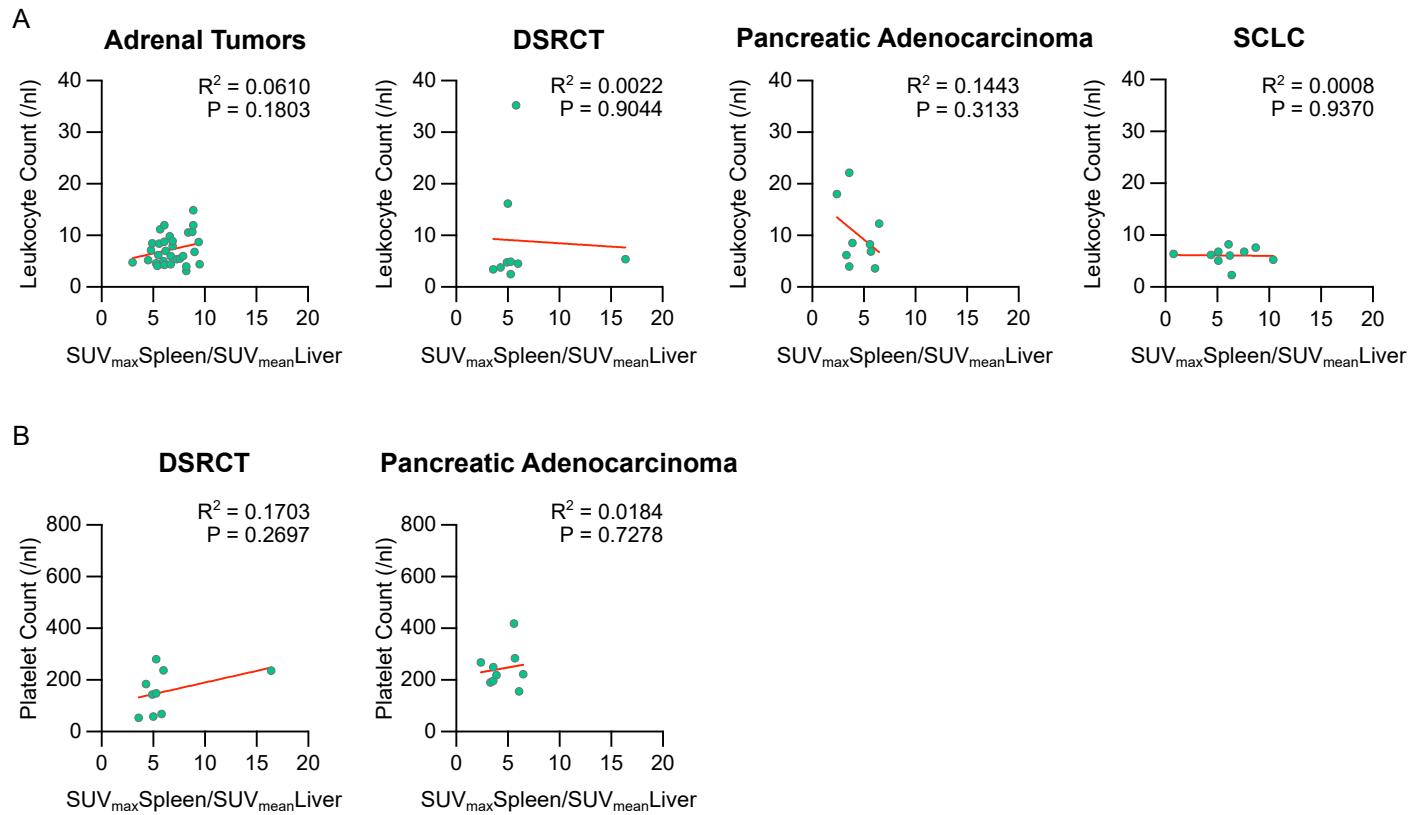

**Supplemental Figure 5. Spleen [<sup>68</sup>Ga]Pentixafor uptake is not associated with serum LDH levels.**  
Correlations of spleen-to-liver ratios (SUV<sub>max</sub>Spleen/SUV<sub>mean</sub>Liver) with serum LDH levels (U/l) in patients with adrenal cancer, n = 31; DSRCT, n = 9; neuroendocrine tumor, n = 25; NSCLC, n = 9; pancreatic adenocarcinoma, n = 7 and SCLC, n = 9.

All statistical analyses were performed using simple linear regression. R<sup>2</sup> and P values as indicated on the graphs.

**Supplemental Figure 6. Spleen [<sup>68</sup>Ga]Pentixafor uptake is not associated with blood hemoglobin levels.**  
Correlations of spleen-to-liver ratios ( $\text{SUV}_{\text{max}}\text{Spleen}/\text{SUV}_{\text{mean}}\text{Liver}$ ) with blood hemoglobin levels (g/dl) in patients with adrenal cancer, n = 31; DSRCT, n = 9; neuroendocrine tumors, n = 25; NSCLC, n = 9; pancreatic adenocarcinoma, n = 7 and SCLC, n = 10.

All statistical analyses were performed using simple linear regression. R<sup>2</sup> and P values as indicated on the graphs.

**Supplemental Figure 7. Spleen [<sup>68</sup>Ga]Pentixafor is not associated with leucocyte count and/or platelet counts in some entities.**

**A** Correlations of spleen-to-liver ratios ( $SUV_{\max}Spleen/SUV_{mean}Spleen$ ) with peripheral leucocyte count in patients with adrenal cancer, n = 31; DSRCT, n = 9; pancreatic adenocarcinoma, n = 9 and SCLC, n = 10.

**B** Correlation of spleen-to-liver ratios ( $SUV_{\max}Spleen/SUV_{mean}Spleen$ ) with peripheral platelet count in patients with DSRCT, n = 9 and pancreatic adenocarcinoma, n = 9.

All statistical analyses were performed using simple linear regression. R<sup>2</sup> and P values as indicated on the graphs.
