Figure S1: Representative overlay microscopy images (bright field and fluorescence) of untreated human skin. Scale bars correspond to 50 μm.

Figure S2: Transmission electron microscopy images of untreated human skin. Scale bars correspond to 1 μm.
Figure S3: Transmission electron microscopy images of (a) hPG-amine covered TRGO (hPGN-Gs) and (b) hPG-sulfate covered TRGO (hPGS-Gs), each loaded with the drug tacrolimus, Scale bars correspond to 100 nm.
