

### Yeast Two-Hybrid binding assay

Yeast strain: *S. cerevisiae* Y187

Interaction tested between: WT GIPC1 and WT SH3BP4 or WT MACC1

No.	BD-Plasmid	Amino acids	Blue colonies within			AD-Plasmid	Amino acids
			1 h	2h	4 h		
1	pGBT9[GIPC1]	1-333	-	-	-	pGAD10	-
2	pGBT9	-	-	-	-	pGAD10[rSH3BP4]	1-961
3	pGBT9[GIPC1]	1-333	+	+	+	pGAD10[rSH3BP4]	1-961

**Supplementary Figure 1:** Results of the β-galactosidase filter assay. To test for protein-protein interaction between variants of GIPC1, GIPC2, or GIPC3 and SH3BP4 or MACC1, respectively, the Y187 yeast reporter strain was co-transformed with the indicated combinations. Yeast colonies that could grow on SD agar plates without histidine, tryptophan, and leucine were lifted onto round filters. Yeast cells were then lysed in liquid nitrogen. The presence of yeast colonies that developed blue stain was recorded 1, 2, and 4 h after addition of the substrate X-Gal. Markings are as follows: “-” means that no blue colonies were visible; “+” that all colonies were stained blue; and “+/-” that only some of the colonies developed blue stain.
