Supplementary Figure 1: Reporter specificity tests, using Western blot analysis for ERK and established targets of the respective inhibitors. Cell lines used and inhibitors are given. For details, see Materials and Methods. Insets per inhibitor are from same membrane.

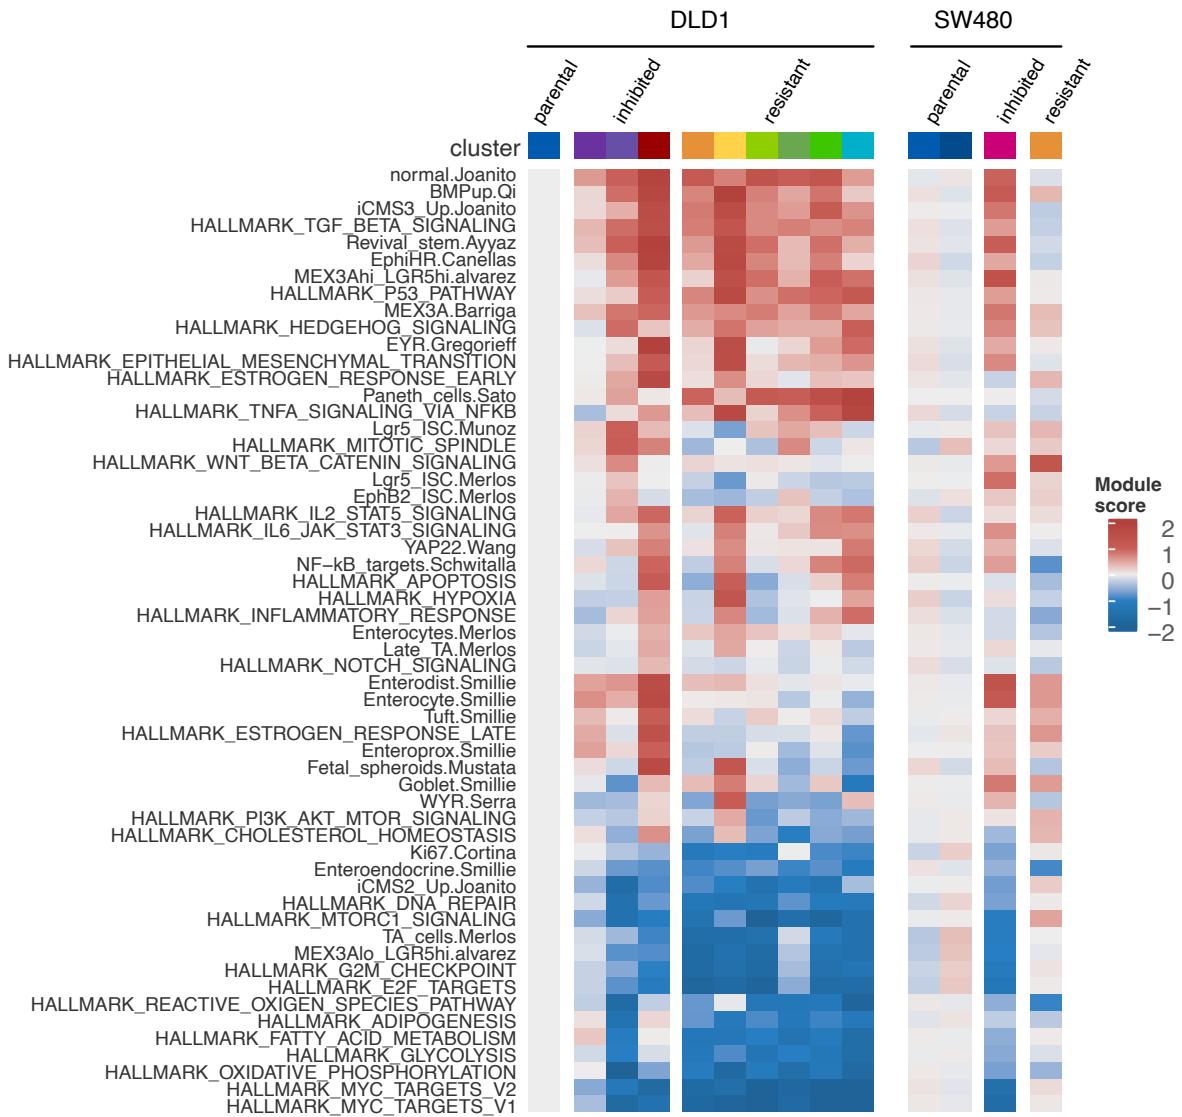

Supplementary Figure 2: Gating strategy for sorting of RASi-resistant DLD1 subpopulations. Top to bottom: Untransfected DLD1 cells; parental DLD1 cell population transfected with the FIREX plasmids; resistant DLD1 population after dose escalation with RMC-7977. **Left to right:** All sorting events with sorting window for Live cells; All live cells with sorting window for single cells; mVenus/mKate2 fluorescence of cells in the single cells window. For sorting windows, see main Fig. 3H.

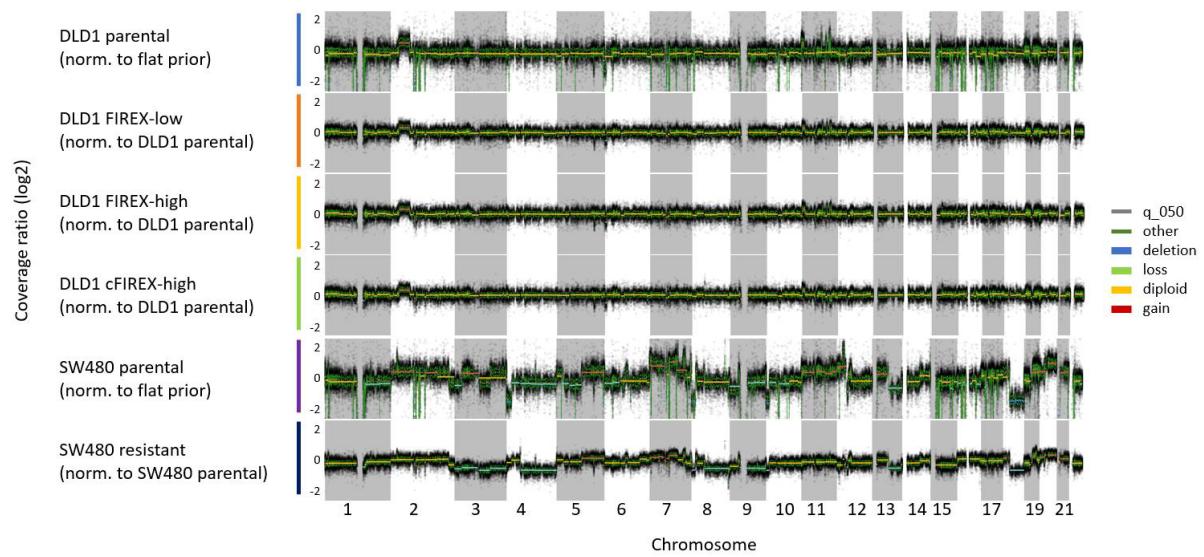

Supplementary Figure 3: Complete Progeny pathway activity analysis of clusters, as shown in main

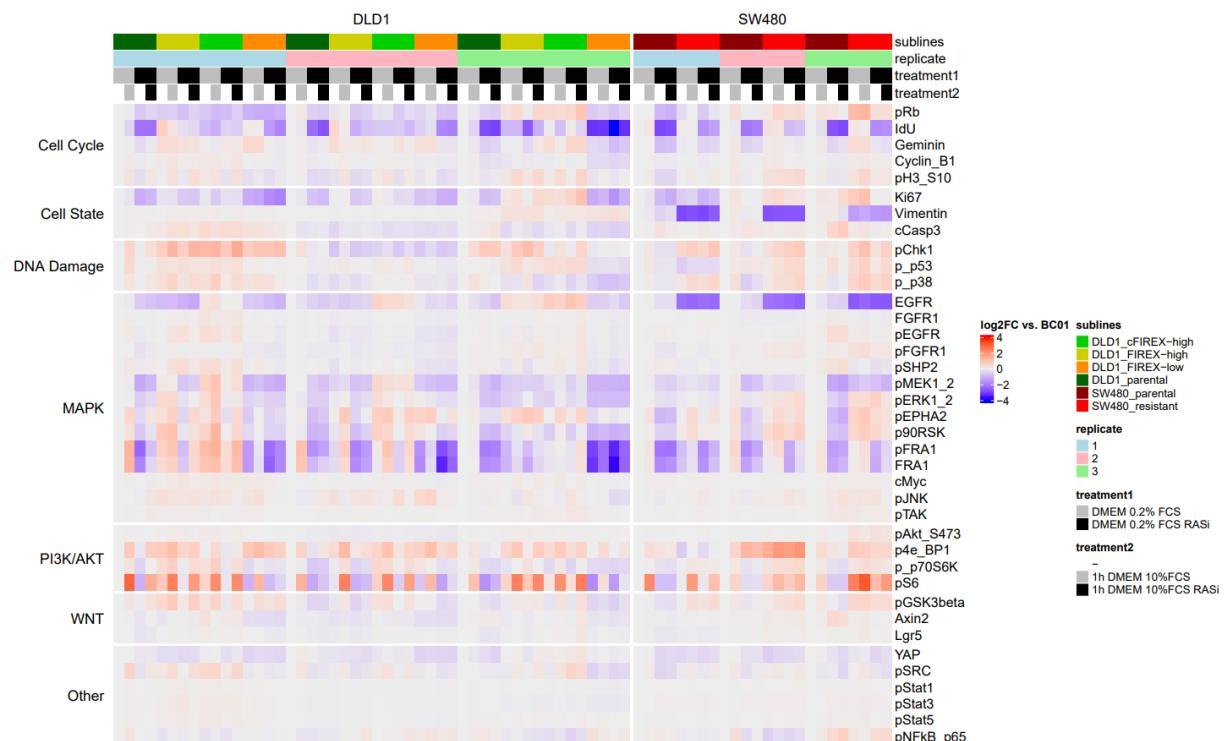

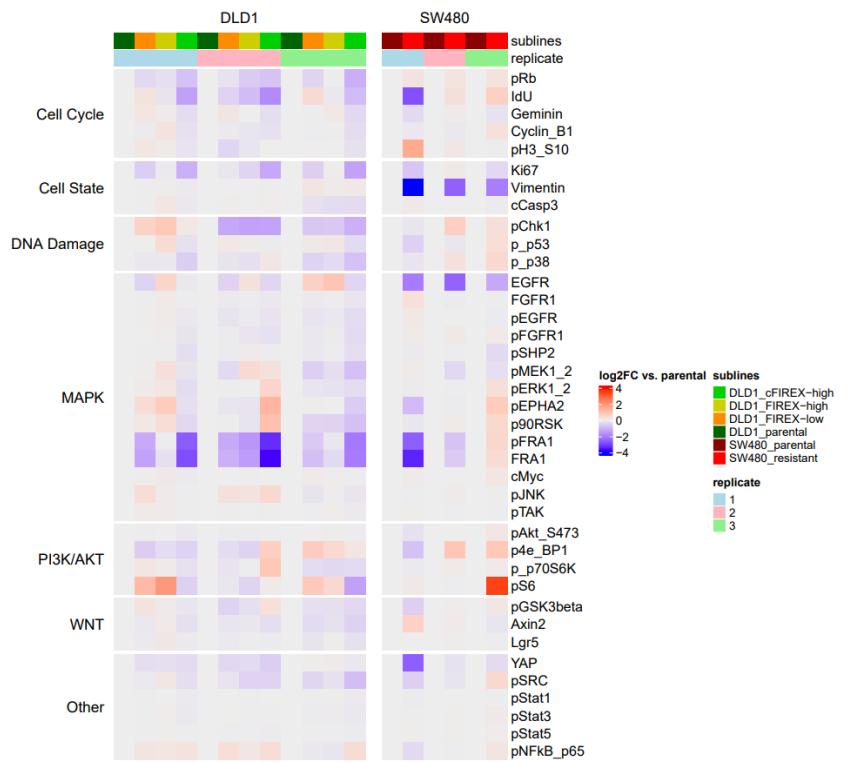

Figure 5D **A** Pathway scores (1) for clusters of DLD1 cells, **B** Pathway scores for clusters of SW480 cells.

Supplementary Figure 4: Activities of CRC-relevant signaling activities. Figure gives mean pathway score per signature. For details on signatures, see associated Information on Zenodo. Signatures were extracted from the following papers: For hallmark signatures (2), for Progeny, for signatures related to colon and CRC cell heterogeneity (3–17).

Supplementary Figure 5: Copy number profiles of parental and resistant cell subpopulations, as indicated. For gene lists with copy number changes, refer to Supplementary table 1. Parental lines were compared to a flat (diploid) prior, while resistant cell lines were normalized to the parental line.

Supplementary Figure 6: Information on mass cytometry replicate experiments. Above: Biological replicate mass cytometry experiments without perturbation (relates to main Figure 6A), **Below:** Biological replicate mass cytometry experiments with perturbation (relates to main Figure 6C).
