

Supplementary Fig. 2. Kaplan-Meier survival curves of NSL complex members.

A-F: Kaplan-Meier curves showing the association of mRNA expression of *MCRS1* (A), *PHF20* (B), *KAT8* (C), *KANSL3* (D), *HCF1* (E) and *OGT* (F) with overall survival in the Mulligan MM patient dataset. Log-rank (Mantel-Cox) test was used to calculate P values and hazard ratios (HR).
